Computer Based Test (CBT) Guidelines

The major examinations being conducted by NTA are Computer-Based Tests (CBT). A CBT requires candidates to sit in front of a computer terminal (node) allocated to them against their Roll number and Admit card. After logging the candidate will get detailed instructions for the examinations. At the designated time of the start of the examination, the candidates will be able to proceed and see the questions on the computer screen using the computer mouse. Candidates will have the option to change/modify/edit/answers already entered at any time during the examination.

Procedure for appearing in Computer Based Test (CBT):

(Sample/mock test will be available on the NTA website: www.nta.ac.in for hands-on practice)

- (a) A computer terminal (node) indicating the Roll Number will be allocated to each candidate. Candidates should find and sit on their allocated computers only. Any candidate found to have changed room/hall or the computer on their own other than the one allotted would lead to cancellation of candidature and no plea in this regard would be entertained.
- (b) For login, the candidate will have to enter a **login ID and password**. The computer terminal allotted to the candidate will display the WELCOME login screen, the Candidate's photograph, and the subject opted by the candidate.

Appendix - VI

Procedure to be adopted for compilation of NTA scores for multi-session Papers (Normalization procedure based on Percentile and Equi percentile method)

Need for Normalisation

For several subjects, the CUET (UG)-2022 and CUET (UG) - 2023 were conducted in different shifts. Since the question papers for any subject in different shifts are different and it is quite possible that despite all the best possible efforts of maintaining equivalence among various question papers, the difficulty level of these question papers administered in different sessions may not be the same or similar. Some of the candidates might have ended up attempting a relatively tougher set of questions when compared to other sets. The candidates who attempted the comparatively tougher examination are likely to get lower marks as compared to those who attempted the easier one; the scores of the students across shifts are not directly comparable. There is a need for normalizing the marks across shifts to make them amenable to such comparisons.

A Committee headed by a Senior Professor from the Indian Statistical Institution Delhi and comprising of Senior Professors from the Indian Institute of Technology Delhi and the University of Delhi had detailed deliberations to arrive at the methodology.

As already intimated in the Information Bulletin of CUET (UG) - 2022 and CUET (UG) - 2023 the raw score of each candidate in each subject will be normalized using the Equi-percentile method. This is done separately for each subject for which the examination is held in multiple shifts.

For each subject for which the examination is held in multiple shifts, the raw score for each candidate appearing for the subject will be converted into NTA Score (Percentile Score & Normalized Score) in the following three steps.

Step 1: Convert Raw Scores into Percentile Scores.

The percentiles are calculated separately for each shift.

- 1. Record the number of candidates who have appeared in a shift. Denote this number by N.
- 2. Sort all the candidates in one shift in decreasing order of their marks.
- 3. Note the *raw marks* for each candidate. Suppose this is denoted by *T*. Count the number of candidates in that shift whose raw scores are less than *or equal to T*. Denote this number by *m*.
- 4. The percentile score for this candidate is then calculated as:

$$\mathbf{P} = \frac{m}{N} * 100$$

Illustration:

Suppose that the examination in a certain subject is held in two different shifts, SI and S2, say. Consider six candidates A, B, C, D, E, and F out of which A, B, and C are from shift SI and the other three are from shift S2.

Let the raw marks of the six candidates be x_A , x_B , x_C (shift S1 marks) and y_D , , y_F (shift S2 marks).

For candidates A, B, and C, the percentiles are calculated using the total marks obtained by candidates appearing in shift S1 (in the same subject) as explained above.

Similarly, for candidates D, E, and F, the percentiles are calculated using the total marks obtained by candidates appearing in shift S2 (in the same subject) as explained above.

Let the respective percentiles be denoted by P_A , P_B , P_C , P_D , P_E , and P_F .

The above data is summarised in the following table. The terms in red colour indicate that these are the output of this step.

	Shift S1		Shift S2			
Candidate	Raw score	Percentile	Candidate	Raw score	Percentile	
А	x _A	P_A	D	УD	P_D	
В	x _B	P_B	E	y_E	P_E	
С	xc	P_C	F	y_F	P_F	

Since the calculation for percentiles in any shift depends only on the data from that shift alone, there is a separate table for each shift.

Step 2: Pull the percentiles to the marks scale for each session to getaNormalised Score.

- The data across all sessions tabulated at the end of *step 1* is collated into a single table.
- The columns for the shift-wise raw score should be kept separate.
- All the records are then sorted in decreasing order of the percentiles.

Illustration (Continued):

In the illustrative example given above, suppose that the percentiles of the six candidates satisfy

$$P_E > P_A > P_C = P_F > P_B > P_D$$

Then the collated table would look as given below:

Candidate	Percentile	RawscoreS1	RawScoreS2
E	P_E	_	y_E
А	P_A	x_A	—
C&F	$P_C = P$	xc	y_F
	F		
В	P_B	x _B	—
D	P_D	—	УD

Candidate C from shift S1 and candidate F from shift S2 have the same percentile. The relevant entries under "Raw Score S1" and "Raw Score S2" are the actual raw scores x_C and y_F respectively. This has the obvious interpretation that marks x_C of shift S1 are equivalent to marks y_F of shift S2.

Candidates A and B, appearing in shift SI, have a blank entry in column "Raw Score S2", as there is no corresponding candidate having exactly the same percentile from shift S2. Similarly, Candidates D and E, appearing in shift S2, have a blank entry in column "Raw Score S1", as there is no corresponding candidate having exactly the same percentile from shift S1.

- In the remaining part of this *Step 2*, the blank entries in the two "*Raw Score*" columns are filled up using linear interpolation.
- Consider a record (row) whose entry in the column "*Raw Score S1*" is blank. The blank will be replaced by the interpolated score X which is calculated as:

$$X = x_1 + \frac{x_2 - x_1}{p_2 - p_1} \quad (P - p_1)$$

Where:

- P is the corresponding entry in the "Percentile" column
- x_1 is the first *non-blank* entry BELOW X. i.e., $x_1 < X$ and there is no other non-blank entry in the column between x_1 and X.
- x_2 is the first *non-blank* entry ABOVE X. i.e., $x_2 > X$ and there is no other non-blank entry in the column between x_2 and X.
- p_1 is the entry in the "*Percentile*" column corresponding to x_1 from the column "*Raw Score S1*".
- p_2 is the entry in the "*Percentile*" column corresponding to x_2 from the column "*Raw Score S1*".

Note that there may be several blank entries between x_1 and x_2 .

- All the blank entries in column "*Raw Score S1*" can now be replaced by the interpolated values.
- The blank entries in column "*Raw Score S2*" are also replaced using a similar procedure.

The table in the illustrative example would look like the following, where the entries in red indicate the additional output at the end of this step.

Candidate	Percentile	Raw Score S1	Raw Score S2
E	P_E	X_E	${\mathcal Y}_E$
А	P_A	x _A	Y_A
C&F	$P_C = P_F$	xc	${\mathcal Y}_F$
В	P_B	x _B	Y_B
D	P_D	X_D	y_D

Step3: Calculation of the Normalised Score

Now for each subject, there is a score assigned to each percentile value for each session. The Normalised score, Z, corresponding to a percentile value P, is calculated as:

Z= Average of $(u_1, u_1, u_1, \dots, \dots, u_t) = \frac{u_A + u_B + u_C + \dots + u_t}{t}$

Where u_A, u_B, \dots, u_t denote the raw scores corresponding to the percentile P in each of the different sessions

<u>Illustration</u> (Continued):

		Raw	Raw	Normalized
Candidate	Percentile	ScoreS1	ScoreS2	Score
E	P_E	X_E	${\cal Y}_E$	$(X_E + y_E)/2$
А	P_A	x _A	Y_A	$(x_A + Y_A)/2$
C&F	$P_C = P_F$	xc	${\mathcal Y}_F$	$(x_{C} + y_{F})/2$
В	P_B	x _B	Y_B	$(\boldsymbol{x}_B + \boldsymbol{Y}_B)/2$
D	P_D	X_D	${\mathcal Y}_D$	$(X_D + y_D)/2$

Step1: Convert Raw Score into Percentile Score

The percentile score for this candidate is then calculated as:

 $Percentile \ Score = 100 \ x \ \frac{with \ raw \ score \ EQUAL \ TO \ OR \ LESS \ than \ T \ Score}{Total \ No. of \ Candidates \ who \ appeared \ in \ the \ session}$

Step 3: Calculation of Normalized Score: Now for each subject there is a score assigned to each percentile value for each session. The Normalised score, Z, corresponding to a percentile value P, is calculated as Z= Average of (uA, uC,....ut)=uA + uB + uC +,...+ut/t

Where uA, uC,.....ut denote the raw scores corresponding to the percentile P in each of the different sessions

The above method is based on the work: "Normalization of marks in multi-session examinations", Abhay G. Bhatt et al, CURRENT SCIENCE, Vol. 118, No. 1, 10 January 2020.

Note: The NTA is planning to do the CUET (UG) 2024 examination in a single shift for each language/subject/General Test, so that the need for Normalization will not exist. However, under unavoidable circumstances, if any subject is conducted in multi-shifts, then normalization will be done. The performance of every candidate will be evaluated using the equi-percentile method wherein normalized marks of each candidate will be calculated using the percentiles of each group of students in a given shift across multiple days for the same subject.

Appendix VII

How to fill in the OMR Answer Sheet

- 1. Do not fill in more than one option for any of the questions because there is only one answer, which is the **most appropriate** for all the questions.
- 2. Use only a Blue/Black point pen to darken the appropriate circle.
- 3. Before filling the OMR Sheet, the Candidate should remember one thing OMR sheets are evaluated by computer software. This software is very sensitive and can only read properly filled black-coloured bubbles. Do not tamper or scratch the OMR sheet. Only provide the required information in the OMR sheet.

- 4. Specific spaces or boxes are provided in the OMR sheets to fill in the required information like Roll Number, Test Booklet No. and Test Booklet Code and do not write anything else on the OMR sheets or do not make any specific symbol or sign. This can lead to the rejection of the OMR Sheet.
 - a. For example, if a candidate has a 10-digit Roll Number. The correct way to fill in the Roll Number is mentioned in the following example. The Roll Number will be mentioned in the Admit Card.

b. The Candidate should ensure that 7-digit Test Booklet No. (for example) has been filled and marked correctly.

5. In the OMR Sheet, write the Candidate's Name, Father's Name, and Mother's Name (in running handwriting) in the Name column as given in the following box

6. Do not fill in more than one option for any of the questions because there is only one answer, which is the **most appropriate** for all the questions.

6. The candidates are required to sign with time (in running handwriting) in the declaration column.

7. Make sure that the CODE printed on the OMR Answer Sheet is the same as that on the Test Booklet. In case of discrepancy, the candidate should immediately report the matter to the Invigilator for replacement of both the Test Booklet and the Answer Sheet.

-	est Booklet Code
	•
A	

- 8. In case of any discrepancy for a particular language, only the **English version** will be considered as the final version.
- 9. Rough work must not be done on the Answer sheet.
- 10. The answer once marked can not be changed.
